

Automotive fastening portfolio

Hook, loop and support components for
seat and interior assembly

TECHNICAL SALES PRESENTATION

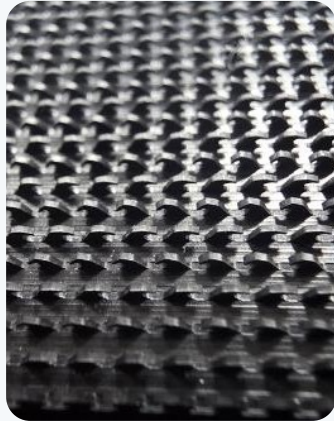

Six products address three installation needs

**Mushroom
hook**

Mold-in fastening

Plastic hook

Mold-in fastening

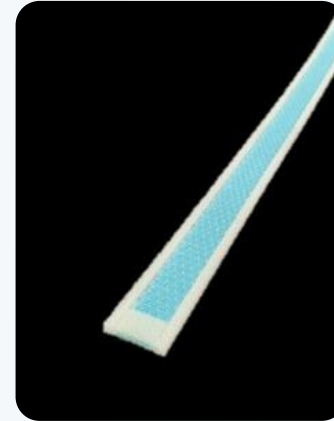

Twin Lock

Reclosable
attachment

**Automotive
loop**

Mating textile

Channel cover

Seat-pad support

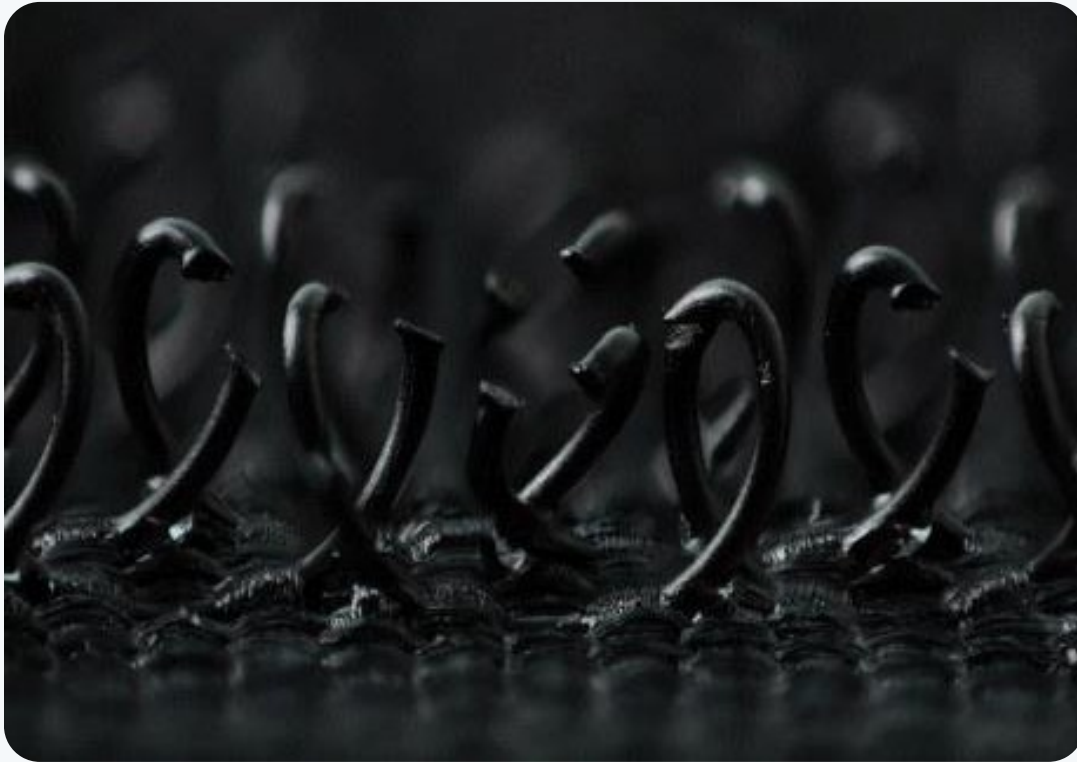

Topper pad

Seat-pad support

The common job: create a controlled interface between trim, foam and interior substrates.

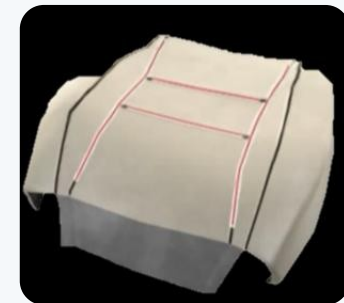

Mushroom hook anchors trim in seat foam

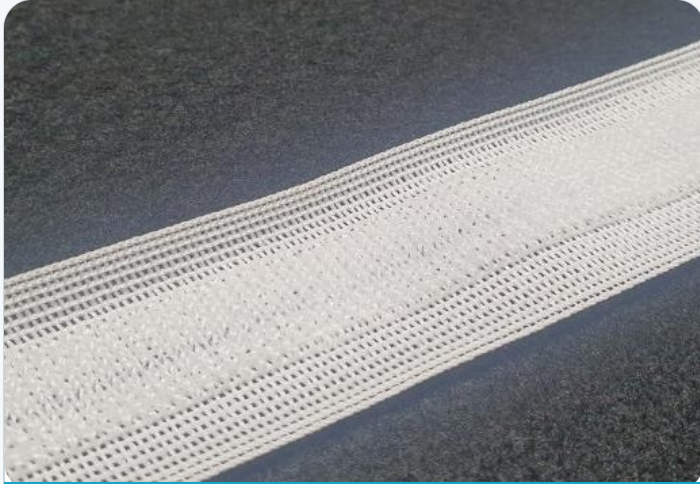

FUNCTIONAL ROLE

- Forms a mechanical interface during PU seat-pad molding
- Engages the mating loop attached to the seat cover
- Available in cover and non-cover constructions

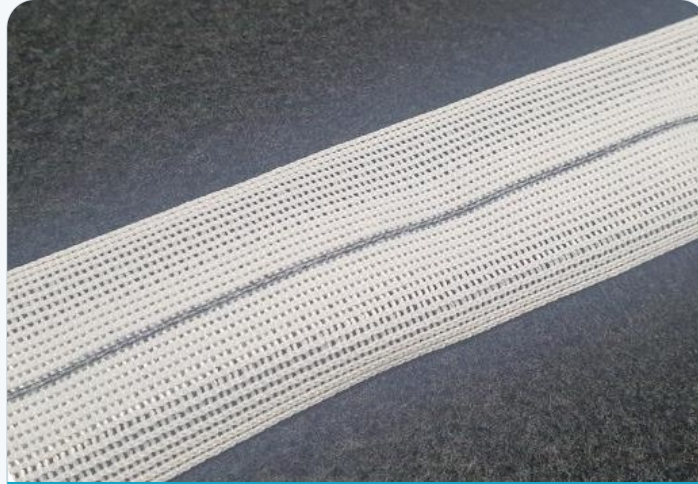

Typical application:
molded seat pad

Automotive loop completes the trim interface

Loop surface - front

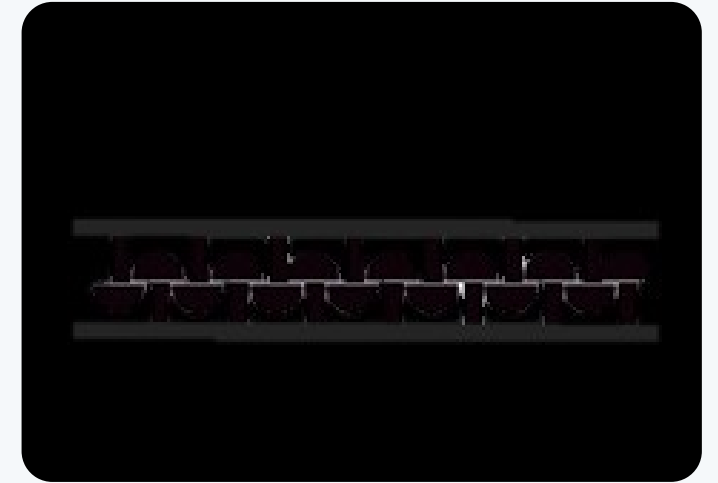

Loop surface - back

Source specification

Polyester flame-retardant yarn
3.2 +/- 0.1 mm thickness
36, 38 and 40 mm widths listed

Twin Lock enables reclosable interior attachment

Product

Twin Lock 1022

- Source deck describes male/female orientation-free engagement
- Applications shown: sunroof, headliner, quarter glass and door trim

Support pads stabilize seat-pad assembly

Channel cover components

Topper pad components

Source-described function: support heater-wire positioning and help prevent localized compression.

Construction uses the same fastening principle

Composite waterproofing stack

Protective finish

PE mesh

PET film

Composite waterproofing sheet

Structural substrate

Hook-and-loop interface

Finish layer

Loop layer

Mechanical hook interface

Base sheet

Structural substrate

Simplified English reconstruction of the source application concept.

Match the product to the validation need

Use case	Suggested family	Buyer validation focus
Seat foam to trim	Mushroom / plastic hook + loop	Foam integration, peel force, leakage
Sunroof or headliner	Twin Lock 1022	Temperature, cycling, substrate adhesion
Heater-wire support	Channel cover / topper pad	Compression, placement, durability
Composite waterproofing	Hook + loop	Bonding, moisture and aging

Next step: define the substrate, load case and customer test standard before selecting a product.
